Lutron Lighting & Shade Control
www.CurrentConceptsHAS.com

Current Concepts and Lutron announce the **Home Energy Solutions.**
This **affordable** Controls System now includes
Temperature and Small Appliances Controls as well as
Lighting and Shade Controls to save you money.

Some devices cost less than \$200 and can be Home Owner installed.

Small Appliance Module, in conjunction with an Occupancy / Vacancy Sensor, may be configured to automatically turn off devices when you leave the room. This standby power mode may save you up to 10% of a home's electric usage.

Light Control: Dimming - Every time you dim the lights you save about 20% in energy.
Sensors - An Occupancy / Vacancy Sensor turns lights on automatically when you walk into a room and turns them off when you leave a room, a savings up to 20% in lighting energy.
Fixtures in the Ivalo collection control high efficiency lighting, including fluorescent and LEDs.

Daylight Control - Sensors automatically dim the lights when there's sufficient daylight coming into a room. Automated Shades, Blinds and Draperies help lower cooling costs in summer and heating costs in winter. Adjusting shades based on the season can save you 10 - 30% on heating and cooling costs.

Temperature Control helps you save on heating and cooling costs. Simply setting back the temperature when a room is unoccupied can help you save up to 16% or more.

Lutron offers total home control systems for control of electric light, daylight, small appliances, and temperature - all at the touch of a button. Having complete control with one touch helps maximize energy savings. Contact Current Concepts today to see how we can help you **save energy and money!**
